

Megadoors for Qantas

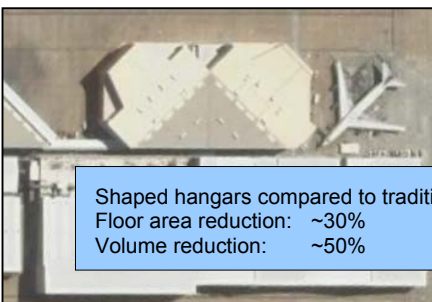

Shaped hangar design with Megadoor.

In 2004 Megadoor supplied two multiple doors to Qantas Airlines for their new maintenance hangars at Sydney Airport in Australia. With Megadoor it was possible to design an innovative facility shaped around the aircraft.

Each multiple door is divided into 5 door leaves with swing-up mullions between. With this solution, the flexibility of the hangar door opening is optimal. The size of the opening is 92x22/10 m (width x height max/min).

Satellite image

Shaped hangars compared to traditional design:
Floor area reduction: ~30%
Volume reduction: ~50%
